228 Internal Combustion Engines
Chap. 4 2. Compression. The
intake valve is closed and the
rising piston compresses the
fuel-air mixture. Near the top
of the stroke, the spark plug is
fired, igniting the mixture. Sat,

CLASSIFICATION OF
INTERNAL COMBUSTION
ENGINES - 2 An internal
combustion engine is a device in
which the chemical energy of the
fuel is released inside the engine
and used directly for mechanical
work. I C Engines Examples:
Piston Engines Gas Engines
Turbine Engines (Open Cycle)
Rocket Engines Thu, 14 Jun

| Internal Combustion Engine ... -
An internal combustion engine
(ICE) is a heat engine where the
combustion of a fuel occurs with
an oxidizer (usually air) in a
combustion chamber that is an
integral part of the working fluid
- flow circuit. In an internal
combustion engine, the expansion
of the high-temperature and high-

Internal Combustion
Engines-2011-05 - All internal
combustion engines depend on
combustion of a chemical fuel,
typically with oxygen from the air
(though it is possible to inject
nitrous oxide to do more of the
same thing and gain a power
boost). The combustion process
typically results in the production
of a great quantity of heat, as well
as the production of steam and
carbon dioxide and other
chemicals at very high
temperature ... Internal
